

Thai Alcohol

Import, Permit, Inventory, and Sales Management System

System Overview

Document Type	System Overview
Target Business	Alcohol Import, Licensing, Inventory, and Sales in Thailand
Creation Date	September 11, 2026
Version	Ver. 1.0

This document is an overview for system conceptualization, development estimation, and requirement organization.

1. System Overview

This system is an integrated business system designed for the alcohol business in Thailand. It centralizes product registration, permit/license management, purchasing, imports, customs clearance, import cost calculation, warehousing, inventory, sales, invoicing, payment, and document management. By linking each business process with a common ID, the system ensures traceability from import to final sale while automating tasks such as document creation, approval, storage, and deadline notifications.

2. Introduction Objectives

- Centrally manage business information from import to sale.
- Prevent expiration or renewal omissions for permits, licenses, and product-related documents.
- Automate the creation of documents such as POs, shipment materials, quotations, delivery notes, and invoices.
- Consistently track products, shipments, lots, inventory, and customers.
- Accurately grasp landed costs and visualize gross profit by product and customer.
- Manage invoicing, payments, and accounts receivable to provide information necessary for management decisions.

3. Basic Policy

"Never enter the same information twice."

Master data is established for products, suppliers, customers, permits, shipments, and inventory. This registered information is reused for forms, application materials, and business processing, reducing transcription work by staff and preventing input errors and reliance on specific individuals.

4. Overall System Flow

Supplier/Manufacturer

Product Registration

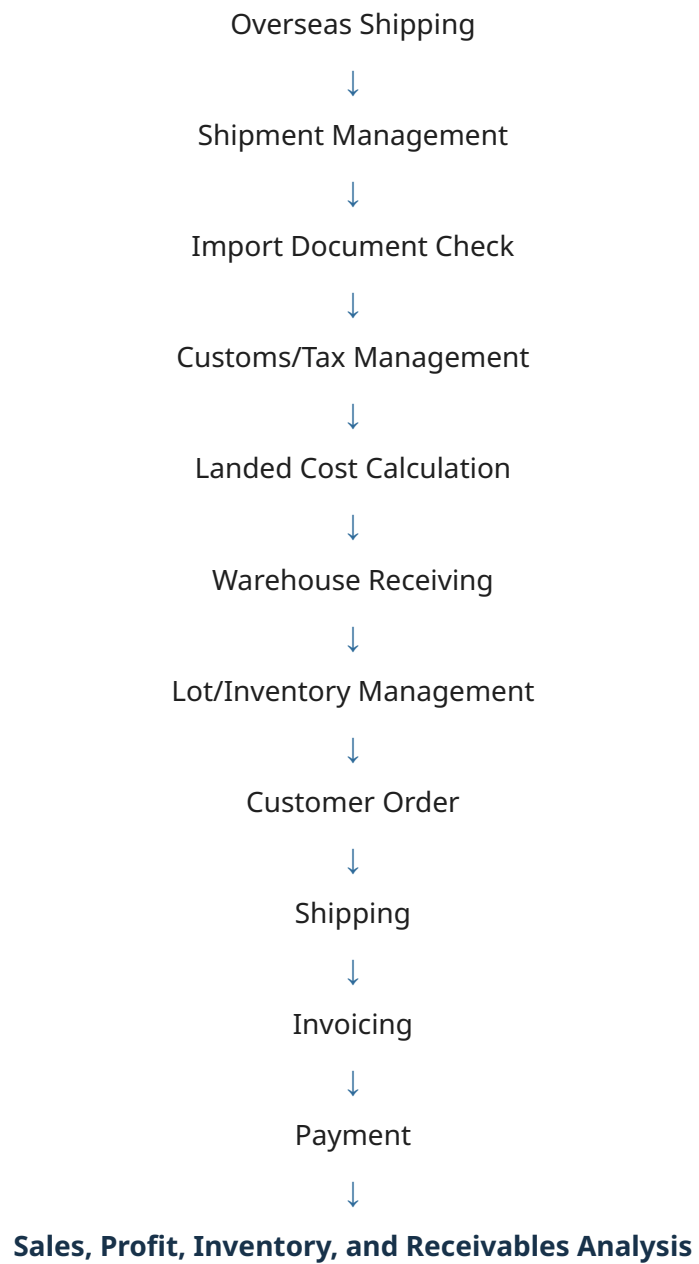

Permit/License Check

Purchase Order Creation

5. Functional Composition

Function	Overview
5.1 Company & Branch Management	Manages corporations, branches, warehouses, stores, Tax IDs, addresses, personnel, and related permits.
5.2 Permit/License Management	Manages permit types, permit numbers, governing authorities, holders, target branches/products, issue dates, expiration dates, renewal deadlines, and attachments.
5.3 Product Master	Manages SKU, brand, product name, alcohol category, volume, alcohol content, HS Code, country of origin, price, and label/permit information.
5.4 Supplier/Manufacturer Management	Manages company info, contacts, currency, payment terms, bank info, and handled products.
5.5 Order Management	Manages PO numbers, products, quantity, unit price, currency, Incoterms, delivery dates, payment terms, and progress; automatically creates POs.
5.6 Shipment/Import Management	Manages shipment numbers, POs, exporters, importers, ETD/ETA, B/L/AWB, containers, invoices, quantities, and customs status.
5.7 Import Document Management	Stores invoices, packing lists, B/Ls, COs, import declarations, permits, excise/tax-related documents, etc., linked to shipments.
5.8 Import Cost Management	Calculates Landed Cost from product costs, freight, insurance, tariffs, excise-related expenses, VAT, customs fees, domestic logistics costs, etc.
5.9 Warehouse/Inventory Management	Manages receiving, shipping, allocation, available stock, and inventory value by SKU, Lot, and Shipment.
5.10 Customer Management	Manages distributors, hotels, restaurants, bars, retail clients, Tax IDs, payment terms, credit, and price ranks.
5.11 Sales Management	Manages the sequence from quotation, sales order, inventory allocation, picking, delivery, to invoicing.
5.12 Billing/Payment/Receivables Management	Manages invoice dates, payment deadlines, payment dates, payment amounts, outstanding amounts, and delinquency status.

6. Permit/License Management

Permits are managed not just as files, but linked with companies, stores, warehouses, products, and shipments. The system monitors renewal deadlines, notifies responsible staff, and manages statuses.

Management Item	Content
Basic Info	Permit type, number, governing authority, holder, target company/branch/product
Deadlines	Issue date, expiration date, renewal deadline
Status	Active, Preparation for renewal, Renewing, Expired, Suspended
Attachments	PDF, images, application forms, related vouchers
Management	Responsible person, physical storage location, remarks, approval history

Deadline Notification Example: 120 days prior = Prepare for renewal, 90 days prior = Notify staff, 60 days prior = Warning, 30 days prior = Important warning, Expired = Red display/business restriction if necessary.

7. Document Automation/Workflow

Various documents are automatically created using registered data such as products, suppliers, customers, permits, and shipments. After creation, the system workflows approvals, PDF finalization, storage, distribution, and history preservation.

Category	Examples of Automated Creation
Purchasing/Export	Purchase Order, Product Details, Shipping Instruction
Import/Customs	Shipment Summary, Import Document Checklist, Documents for customs brokers, Import price details, Landed Cost Sheet
Permits/Compliance	Renewal list, Permit info list, Product/label management table, Basic data for applications
Warehouse/Logistics	Receiving slip, Shipping instruction, Picking list, Inventory list, Lot list
Sales	Quotation, Sales Order, Delivery Note, Invoice, Tax Invoice, Receipt, Credit Note

8. Document Check/File Management

A checklist of required documents is generated when creating a shipment, and the system warns of missing registrations. Files are automatically named and categorized based on criteria such as shipment number.

2026 / Imports / IMP-2026-001 /

- └ Invoice
- └ Packing List
- └ B-L
- └ License
- └ Customs
- └ Tax
- └ Warehouse

9. Approval/Version Management

The following approval flow is set for important documents:

Staff Creation

Supervisor Review

Manager Approval

↓
PDF Finalization

↓
Send/Submit

↓
History Preservation

When revising documents, they are not overwritten; version management (V1, V2, Approved) is used to record who, when, and what was changed or approved.

10. Dashboards/Reports

- Monthly/yearly sales; sales by brand, product, and customer
- Gross profit, gross profit margin, profit by product/brand
- Current inventory, inventory value, stockouts, long-term dead stock
- Shipments in transit/customs, expected arrival, import value
- Permits expiring within 90 days, 30 days, or already expired
- Accounts receivable, outstanding payments, overdue payments

11. Authority Management

User Class	Main Permissions
Administrator	All functions
Import Staff	PO, Shipment, import documents, customs
Compliance Staff	Permits, deadlines, application-related info
Warehouse Staff	Receiving, shipping, inventory
Sales Staff	Customers, quotations, orders, sales
Accounting Staff	Invoicing, payments, receivables, tax-related
Management	View dashboards/reports

12. System Configuration Image

Layer	Content
User Device	PC / Tablet / Web Browser
Business Apps	Products, permits, imports, documents, inventory, sales, invoicing, dashboards
Data	Common database
File	Cloud file storage
Integration	E-mail, Google Drive / OneDrive, accounting, banking, barcodes, EC, APIs, etc.

13. AI/OCR Utilization

A future extension is planned to feature AI/OCR capabilities. When invoices, packing lists, or B/Ls are uploaded, the system will extract supplier names, invoice numbers, products, quantities, amounts, currencies, B/L numbers, ETD, and ETA, and register them into the system after staff confirmation.

14. Implementation Steps

Phase	Content
Phase 1: Basic	Products, suppliers, customers, permits, shipments, inventory, sales
Phase 2: Automation	PO, invoice, delivery note, various lists, PDF creation, auto-save
Phase 3: Workflow	Approvals, notifications, deadline management, auto-emails
Phase 4: AI/Linkage	OCR, AI document analysis, accounting, banking, API integration

15. Expected Effects

- Standardization of import/sales operations and reduction of reliance on specific individuals
- Strengthened management of permit deadlines and required documents
- Reduction of document creation and transcription work
- Ensured shipment/lot traceability
- Improvement of inventory accuracy and cost management accuracy
- Strengthened management of outstanding payments and receivables

- Visualization of management information and faster decision-making

16. Final System Vision

Manage everything from product registration, permit confirmation, purchasing, imports, customs clearance, receiving, inventory, sales, invoicing, and payment within a single system, while automating document creation, approval, storage, distribution, and deadline notifications as much as possible.

Build a foundation that allows for accurate and efficient operation with a small number of people even after the business scale expands, and create a data structure capable of future integration with ERP, accounting, banking, and government e-filing systems.
